

Wholesaler's News

Hello Friends!

This month I want to explain what makes Marzocchi product different from others and point out Hydraulic Wholesalers commitment to stocking Marzocchi gear pumps, motors and flow dividers is huge. The warehouse photo below, depicting a portion of our Marzocchi Product, supports this.

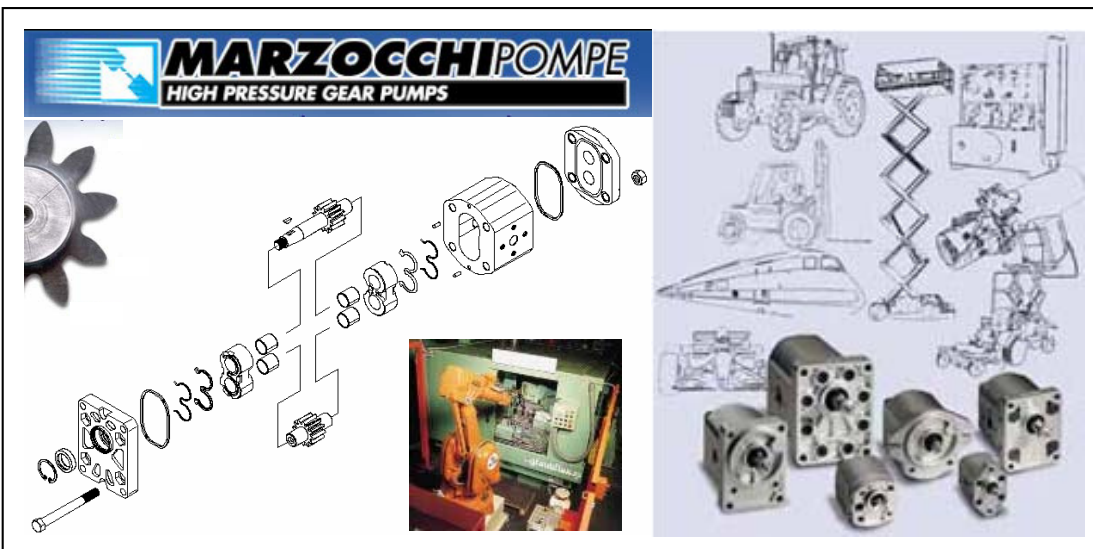

Marzocchi Pump Division was founded in 1961 by Guglielmo and Steano Marzocchi. They have focused on producing high performance (external) Gear Pumps and Motors to exacting standards whilst obtaining high reliability. There is no question this has been achieved; they still strive to improve. All product is assembled in the plant and tested. They accept nothing less than the highest quality control.

Marzocchi is now one of the largest gear pump and motor manufacturers in the world. They regard the end-users success as a very import part of their success. Their design concept considers end user issues, offering high versatility at low cost, and a performer under heavy operating conditions; I believe Marzocchi should be your first choice.

Cheers, Alec

Basic Design Features

- Versatility (*array of shafts, mounts, ports, etc*)
 - Strength
 - Long life
 - High volumetric efficiency
 - High power to weight ratio
 - Compact design
 - Low noise operation
 - Stackable
- These combined features see Marzocchi stand out above others.
